

SOLAR POWER SOLUTIONS

About Prolec Solar Packages

Prolec design and manufacture off grid turn key solar systems that are configured for a wide range of electrical load sizes in either 12 or 24 volts DC.

Packages can be supplied from 5W up to 50W systems with larger packages available upon request.

The operational battery time is selectable to provide either a 3 day, 4 day, or 5 day autonomous supply.

A variety of different solar regulators are incorporated into the design to cater to your supply requirements

This total system solution is housed in an appropriately IP rated and sized enclosure.

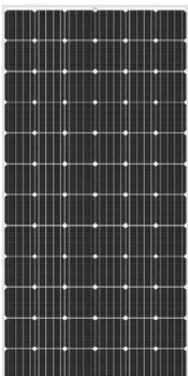

Solar packages can be combined with a wind turbine for added power generation when inclement weather strikes for extended periods.

The Prolec Solar Systems come in 3 package configurations – Superior, Premium and Standard.

Superior Solar Package

Includes these quality products*

Trina Solar Panels, SunXtender Batteries, Plasmatronics Regulator enclosed in a Stainless Steel Prolec Enclosure

Premium Solar Package

Includes these quality products*

Suntech Solar Panels, FullRiver Batteries, Schneider Regulator enclosed in a Mild Steel Prolec Enclosure.

Standard Solar Package

Includes these quality products*

Jinko Solar Panels, Predator Batteries, Morningstar Regulator enclosed in a Mild Steel Prolec Enclosure

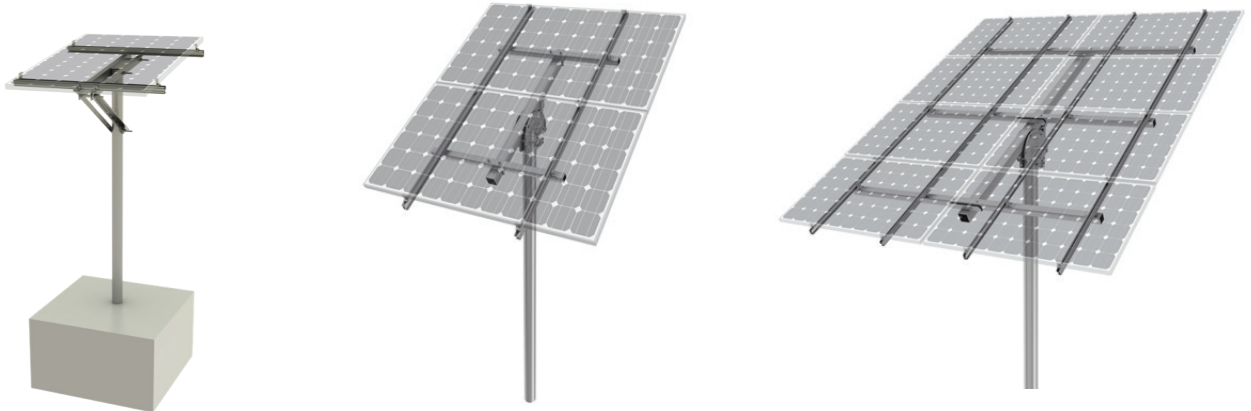

* Dependant upon the rating of the system, a different model of equipment may be substituted to meet design requirements.

Mounting Options

Prolec Solar Packages can be designed, manufactured and installed as a Pole Mounted System, Ground Mounted Frame, Skid Mounted System or Trailer Mounted System.

If our standard mounting systems do not suit your application, we will work with you to design a custom solution to suit your individual requirements
