PART# - CESTOP-20050

PART# - CESTOP-150100V/A/G

Prolec's Emergency Stop Conveyor Label solves your problem of compliance to AS/NZs4024.3610:2015 - All conveyor pull wires are to be labelled every 30 metres indicating an emergency stop is possible.

Many producers of emergency stop labels don't utilise environment resistant materials which is essential in an industrial environment, and their products are not secure - moving with vibration outside of the compliance range.

Our product ensures employee safety and legislation compliance with heavyduty weatherproof material, recognisable red and white reflective colourway, and becomes immovable when secured. Additionally, there is clear vision from various angles including when looking down the line of the conveyor.
